

Customer Product Evaluation Report:

The **IKA RV 10 Basic V-C rotary evaporator** and **Vacuubrand MD1C Vario pump** kit (including wireless controller) with the Asynt **Vacuustand** was well received by all group members and at the end of the trial we agreed that it was superior to all other systems which we had previously trialled.

Of particular note was the 'auto mode' feature on the MD 1C Vario pump which was found to work very effectively on all occasions, irrespective of solvent mixtures and flask size and fill level.

The wireless functionality of the pump was found to be little more than a gimmick and after the first day or two was never used by any members of the group but the whole setup works very well and has a reasonable footprint (especially considering it includes the pump, which is very good). All solvents, including toluene, water and DMF, were removed completely and in good time. The interface is intuitive and easy to use.

Overall I would highly recommend this rotary evaporator and pump setup, when the purchase of a new model is required.
